

# Page Numbering with Different Format

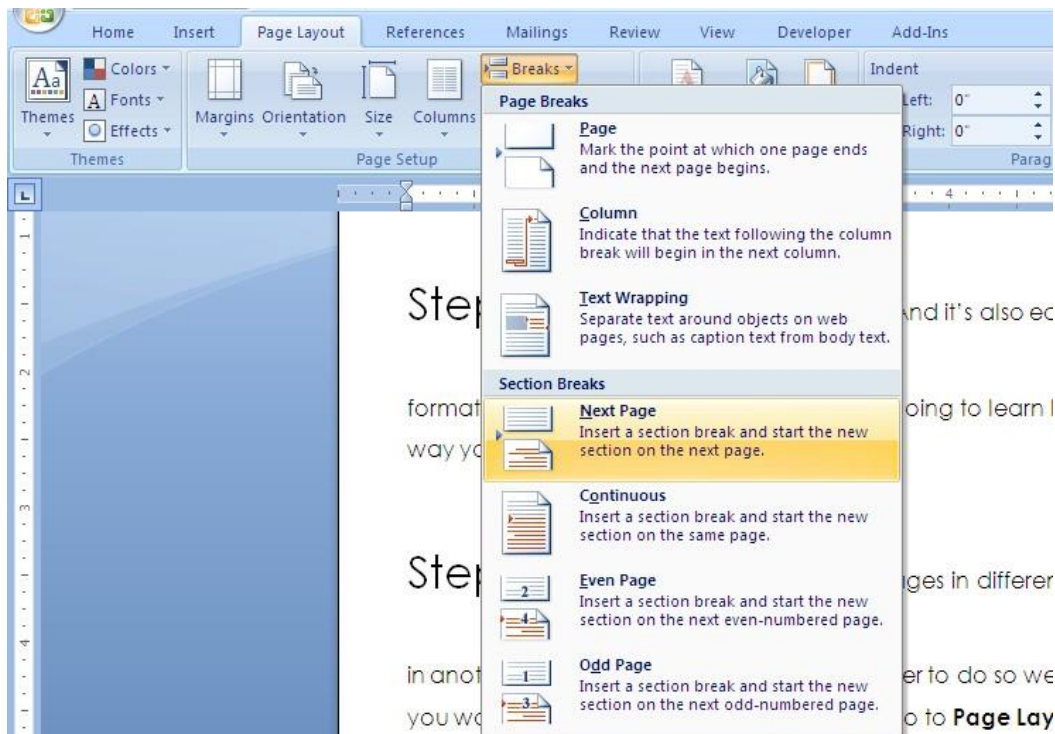

---

**Step1** It is easy to number a page! It's also easy to number pages in different

formats within one document. Today you are going to learn how to number pages just the way you want!

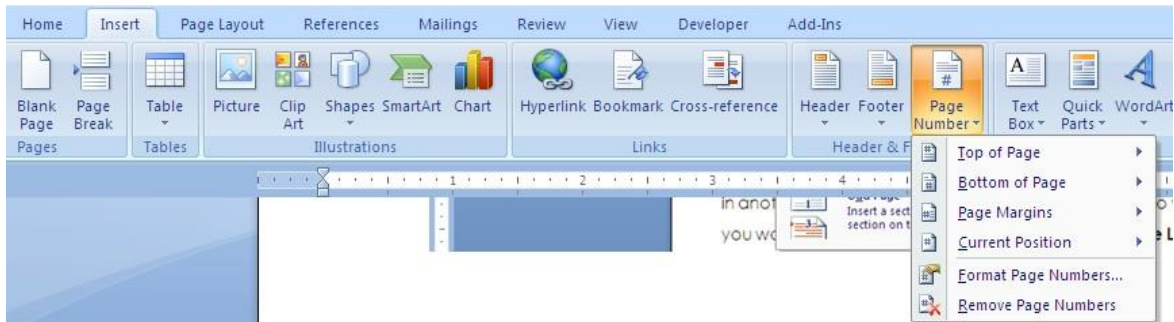

**Step2** If you want to number two pages using different styles you need to break

them, in other words, insert a section break. In order to do so you need to click the very first word you want to put in the next page, and then go to **Page Layout > Breaks > Next Page**

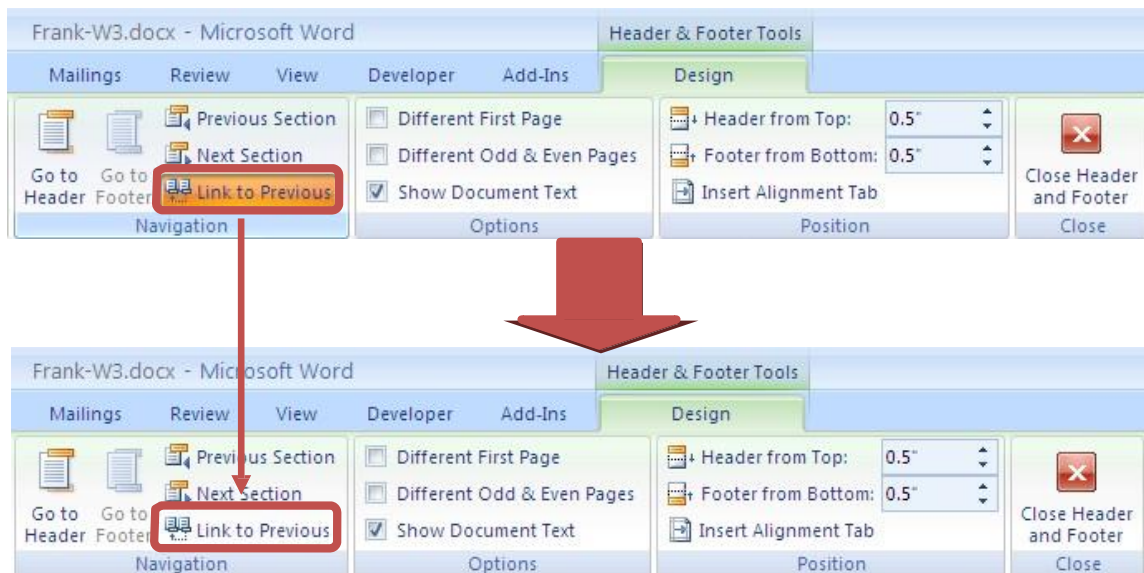

**Step 3** Now you have broken these two pages into two sections. Then you are

going to insert page numbers from the page you want to start from. So, go to **Insert tab**, then click **Page Number**

and select a style you want. Right now you will see the page numbers are still linked between each page. And we can see there is a new tab highlighted on top of the menu bar, called **Header & Footer Tools** under this tab there is a highlighted option called **Link to Previous**, click on it.

**Step 4** Now you will be able to edit page number for these two pages that you

just separated independently. Just double click on the page number on each page and the insert the symbol you want.
